**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9, 12 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over van Cleef, U. S. Patent 6,169,139 or Lyons et al, U. S. Patent 6,744,164 or Hintzer et al, U. S. Patent Application 2002/0193500.

All three references cited teach the formation of fluoropolymer dispersions using methods which include the polymers required in applicants' claims and with a small genus of surfactants that include those exemplified by applicants. Although the octanol/water partition coefficient is not mentioned nor is the extent of surfactant removal, these characteristics would be expected to be related to the polymers and surfactant used. Since the polymers used are the same and the surfactants are also taught, these properties are reasonably presumed to be present in the methods used by the references. The choice of specific surfactants from those taught by the references would be prima facie obvious to one of ordinary skill in the art absent evidence of unexpected results commensurate in scope to the claims. The surfactants taught in the reference are to homologous series of compounds, some of which are those preferred in applicants' method. The choice of homologues is an obvious choice to one of ordinary skill in the art. The rejection is, therefore, proper
